DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on February 2, 2009 has been entered. Claims 31, 37, and 39-40 are still pending in this application, with claims 31, 37, 39 and 40 being independent. Claims 1-30, 32-36, and 38 have been cancelled.

Allowable Subject Matter

2. Claims 31, 37, and 39-40 are allowed.

Regarding **claim 31**, Takahashi et al (US 4,690,513) disclose a zoom optical system comprising, in order from an object side thereof, a first lens group having positive refracting power, a second lens group having negative refracting power, a third lens group having positive refracting power, and a fourth lens group having positive refracting power (column 1, lines 64-67), wherein said second lens group or said fourth lens group includes at least one one-piece lens (column 2, lines 44-51).

Marvin et al (US 2,908,209) disclose wherein at least one lens is formed by molding of a first lens blank that provides a surface including at least an optical function surface after molding, and a second lens blank that provides a surface other than said surface including at least an optical function surface after molding, wherein the first lens blank and the second lens blank are integrated into a one-piece lens (column 4, lines 2-16).

However, the prior art does not disclose wherein at least one positive lens is positioned in said second lens group and satisfies the following condition:

$$0.1 < HH2/\Phi2 < 15$$

where HH2 is a principal point spacing (mm) of the positive lens in the second lens group and $\Phi2$ is a refracting power of the positive lens in the second lens group.

Regarding **claim 37**, Takahashi et al discloses a zoom optical system comprising, in order from an object side thereof, a first lens group having positive refracting power, a second lens group having negative refracting power, a third lens group having positive refracting power, and a fourth lens group having positive refracting power.

Marvin et al disclose wherein at least one lens is formed by molding of a first lens blank that provides a surface including at least an optical function surface after molding, and a second lens blank that provides a surface other than said surface including at least an optical function surface after molding, wherein the first lens blank and the second lens blank are integrated into a one-piece lens (column 4, lines 2-16).

However, the prior art does not disclose at least one positive lens positioned in said first lens group that satisfies the following condition:

$$0.1 < HH1/\Phi1 < 20$$

where HH1 is a principal point spacing (mm) of the positive lens in the first lens group and $\Phi1$ is a refracting power of the positive lens in the first lens group.

Regarding **claim 39**, Takahashi et al discloses a zoom optical system comprising, in order from an object side thereof, a first lens group having positive refracting power, a second lens group having negative refracting power, a third lens

Art Unit: 2862

group having positive refracting power, and a fourth lens group having positive refracting power.

Marvin et al disclose wherein at least one lens is formed by molding of a first lens blank that provides a surface including at least an optical function surface after molding, and a second lens blank that provides a surface other than said surface including at least an optical function surface after molding, wherein the first lens blank and the second lens blank are integrated into a one-piece lens (column 4, lines 2-16).

However, the prior art does not disclose at least one positive lens positioned in said third lens group that satisfies the following condition:

$$0.1 < HH3 / \Phi 3 < 8$$

where HH3 is a principal point spacing (mm) of the positive lens in the third lens group and $\Phi 3$ is a refracting power of the positive lens in the third lens group.

Regarding **claim 40**, Takahashi et al discloses a zoom optical system comprising, in order from an object side thereof, a first lens group having positive refracting power, a second lens group having negative refracting power, a third lens group having positive refracting power, and a fourth lens group having positive refracting power.

Marvin et al disclose wherein at least one lens is formed by molding of a first lens blank that provides a surface including at least an optical function surface after molding, and a second lens blank that provides a surface other than said surface including at least an optical function surface after molding, wherein the first lens blank and the second lens blank are integrated into a one-piece lens (column 4, lines 2-16).

Art Unit: 2862

However, the prior art does not disclose at least one positive lens positioned in said fourth lens group that satisfies the following condition:

$$0.1 < HH4 / \Phi 4 < 8$$

where HH4 is a principal point spacing (mm) of the positive lens in the fourth lens group and $\Phi 4$ is a refracting power of the positive lens in the fourth lens group.
